

# Treatment Preparation Guide: Instructions and Recommendations

## Aprehend Treatment (Biopesticide) – Bedbugs

To maximize the effectiveness of our intervention, M.A.D. Extermination invites you to prepare your home properly. This step is essential to ensure a safe and optimal treatment for everyone.

### General Instructions

-  Remove all bedding and objects from beds and sofas, if necessary.
-  Keep furniture and objects at least 1 foot (12 inches) away from walls.
-  Empty all the furniture from the bedrooms, including the bedside tables. Wash the clothes removed from the chests of drawers at a high temperature, then store them in airtight plastic bags and place them in the bathroom or kitchen.
-  All rooms in the home must be treated in the same way.
-  Please note that you must leave your home with your animals, if applicable, for 4 to 6 hours after the end of the treatment. For children under 2, pregnant women and people with weakened immune systems, we recommend waiting 24 hours before returning home.
-  We recommend that you do not clean floors along the walls for a period of four weeks following treatment.
-  We suggest you use mattress covers specially designed for bedbugs, offering extra protection for your mattresses.

### After Treatment: Key Recommendations

After the treatment, some hidden bedbugs may survive and reappear for a few days. It is essential to continue sleeping in your respective rooms in order to attract them to the treated surfaces, where they will be exposed to the residual insecticide. We recommend that you do not use household insecticides. Please note that these products are not very effective, and their repellent effect could considerably worsen the situation. Finally, avoid using cleaning products on treated surfaces during the treatment period, to preserve its effectiveness.
